

NexusAI - Secure Orchestration for AI Agents

Wagner Medeiros dos Santos

Alabama Launchpad Cycle 2 2026

HelpUS LLC
Gulf Shores, Alabama

The Problem

- Consultancies, IT teams, and small businesses use AI daily
- But they struggle to turn AI responses into **secure, auditable operations**
- Current practice: manual copy-paste between systems
 - Rework and delays
 - Operational errors
 - Loss of knowledge and history

The problem is urgent and affects thousands of companies.

The Solution: NexusAI

- **Secure orchestration platform for AI agents**
- Connects AI to:
 - Files and databases
 - Browsers and scripts
 - Local systems with controlled adapters
- Enables:
 - Automated documentation and verification
 - Audit trails and human validation
 - Operational memory and permissions

Prototype already functional and tested.

What Makes Us Different

Feature	NexusAI	Chatbots	RPA Tools
Conversational AI	✓	✓	✗
Controlled Local Execution	✓	✗	Limited
Persistent Memory	✓	✗	✗
Audit Trail	✓	✗	Basic
Human Validation	✓	✗	✗
Capability Permissions	✓	✗	Basic

NexusAI combines conversation, execution, memory, and audit in one platform.

How It Works - Architecture

Client Layer (ChatGPT, DeepSeek, Gemini, API)
Gateway Layer (Watcher - monitor, extract, route)
Core Layer (Broker, Orchestrator, OpenAI Agent)
Adapters Layer (Files, Databases, Browsers, Scripts)
Persistence Layer (Logs, Audit Trail, Backups)

- Data flow: User → Watcher → Core → Adapter → Resource → Result back to User
- Every action is logged and auditable

Traction - What We've Built

- ✓ **Functional prototype** with local execution
- ✓ **Database connectivity** (memory layer + documents)
- ✓ **Log structure and audit trail**
- ✓ **Watcher as execution gateway**
- ✓ **Integration with OpenAI** (operational reasoning)
- ✓ **Backup and restore mechanisms**
- ✓ **Structured capability profiles** (read/write/exec permissions)

Ready for pilot testing with local companies.

- **Target customers:**

- Consultancies and IT teams
- Small and medium businesses with recurring digital processes
- Sectors: Technology, Health, Legal, Education

- **Market drivers:**

- Rapid growth of generative AI usage
- Pressure to automate while preserving auditability
- Need to reduce copy-paste waste

- **Growing market** - AI operations tools demand increasing rapidly

- **SaaS subscription model**
 - Company/team licenses
 - Individual user licenses
 - Enterprise SLA agreements
- **Anticipated margins:** 70-80% post-scale
- **Go-to-market:**
 - Direct outreach to consultancies and IT teams in Alabama
 - Partnerships with local business networks
 - Alabama Launchpad network and visibility

Pre-revenue - ready for first pilots.

The Team

Wagner Medeiros dos Santos

Founder & CEO

10+ years in systems, infrastructure, automation

Leads product vision and development

Based in Brazil, manages remote development

Wagner M Carvalho

US Operations Manager

Based in Gulf Shores, Alabama

Leads local operations, customer discovery

Will represent company during competition

Complementary skills: technical + local operations.

Future Growth - Next Milestones

- ① **Refine core architecture** based on local pilot feedback
- ② **Develop user interface and dashboard** for easier adoption
- ③ **Run 6 pilots** with Alabama-based companies
- ④ **Launch marketing and sales** operations
- ⑤ **Prepare for seed funding round**

Alabama Launchpad funding will accelerate all these milestones.

What We Need - Use of Funds

- **Request:** Up to \$100,000 (non-dilutive cash prize)
- **Use of funds:**
 - Refine core architecture based on local pilot feedback
 - Develop user interface and dashboard
 - Run 6 pilots with Alabama-based companies
 - Launch marketing and sales operations
 - Prepare for seed funding round

With Launchpad support, we will create local jobs and put Alabama on the AI innovation map.

Thank you!
